

Driver Testing Inspections

Applus+ specializes in the development of electronic examination systems for the testing and monitoring of driver safety and performance.

DESCRIPTION

Challenge

Applus+ specializes in the development of electronic examination systems for the testing and monitoring of driver safety and performance. This testing can lead to significant cost savings for the governments where Applus+ provides for the administration of driver knowledge and practical roadside driving.

Solution

Applus+ has developed an in-house web portal that enables applicants to book their driving test. This facility allows the applicant to choose from a number of dates and times that are most suitable. The application can allow the client to open the required number of slots depending on the staff available on the day. This web-based solution was designed and developed based on client requirements, so now it is an extremely user-friendly, highly efficient and cost-effective system.

The development of mobile technology such as [DriveSuite](#), [DrivewAatch](#) and DriveQuiz provides clients with an electronic solution for capturing and transmitting road test information used to grant licenses to drivers.

Benefits

Applus+ offers a range of services in the field of driver testing that are innovative, user-friendly and cost-effective.

- [DriveSuite™](#) is an innovative, user-friendly driver's license examination system that measures written and practical road driving skills tested at Departments of Motor Vehicles and/or remote locations.
- [DrivewAatch™](#) is the integrated methodology for testing and monitoring driver proficiency, safety and performance.
- DriveQuiz™ is a customized, knowledge testing system for automobile, motorcycle or commercial driver's licenses.
