

Vehicle Registration Inspections

All vehicles and motorcycles driven on public roads worldwide must go through a registration process; whether they are new or imported into the country, there must be a record of their existence from its country of origin.

Challenge

Applus+ can provide vehicle registration inspections on behalf of governments or policymakers, ensuring fair, comprehensive and independent service.

Solution

Applus+ can develop a web-based solution to conduct the verification process and ensure that the vehicle presented for inspection corresponds to the description provided by the vehicle owner, for example, a cross reference check of the vehicle's chassis number to its relevant documentation.

The registration inspection process is conducted by an experienced Applus+ vehicle inspector, who will verify that the vehicle's physical condition matches the relevant documentation. The administration process will then be conducted at the same time as the inspection, so the registration process is convenient for both the user and the regulator.

Benefits

All data can then be viewed and obtained through a real time web-based application by the authorized government departments to ensure that each vehicle complies with the legal requirements in that country.
