

Automotive Inspection Services

Applus+ Automotive inspection solutions can improve operational efficiency and reduce both costs and risks for clients throughout the automotive industry

Challenge

Applus+ Automotive, one of the global leaders in Automotive Inspection and Verification is committed to providing governments, manufactures and traders with the best solutions in improving vehicle safety and reducing harmful vehicle emissions.

Solution

Applus+ has worked extensively with Government agencies and vehicle manufacturers to develop tailor-made, best-in-class and innovative technological automotive inspection solutions. Applus+ has also conducted over 17 million inspections annually across Europe, North and South America. Combining its local market knowledge with experienced automotive specialists, Applus+ has developed and operated a number of vehicle inspection and programs.

Applus+ has extensive international experience in developing solutions related to a variety of vehicle inspection programs:

- Roadside Inspections to support local authority enforcement of passenger and commercial vehicles.
- Periodic and Non-Periodic Inspections that are mandatory for specific proactive or reactive reasons such as safety, voluntary, accident and quality.
- Custom Inspections to ensure the conformance of new or used vehicles entering a country. Registration Inspections to ensure that vehicles meet legislative standards prior to registration.
- Alteration/Modification Inspections that are mandatory after modifications are made to vehicle.
- Special Inspections that complement periodic vehicle inspections (ADR, ATP, taximeters and others).
- Sonometry for noise control inspection.
- On Board Diagnosis (OBD) for gas emissions and electronic vehicle inspections.

- Customer Care and helpdesk centre
- Biometric fingerprint scanning for access authentication
- Electronic iris scanning for access authentication
- Remote video monitoring
- Kiosk-based self-service testing

Benefits

Applus+ can leverage its extensive experience as a provider of custom technology solutions in order to develop a comprehensive, multi-faceted technology solution that can specifically meet all of the client's needs, therefore resulting in a versatile integrated application specific to the client's requirements.
